

Supplementary Tutorial

Working With Anaconda

By Armita Razavi

In This Video

- 💡 Working With Environments
- 💡 Install Packages On Environment
- 💡 Working With Jupyter Notebook

Working With Environments

- Get List of Environments

conda env list

- Create New Environment

conda create -n [new env name]

Working With Environments

- Activate and Switch To New Environment

conda activate [env name]

- Back to conda base Environment

conda activate base

Working With Environments

➤ Delete New Environment

conda activate base

conda remove -n [env name] --all

➤ Clone the base

conda create -n [new env name] --clone base

Install Packages On Environment

First, activate the environment, then use below command

conda install [package name]

- Check list of all installed packages in environment

conda list

Working With Jupyter Notebook

- Install Jupyter Notebook on Environmnet

conda install jupyter

- Run and Open Jupyter Notebook

jupyter notebook
